

Update your Air Seeder to the NEW JOHN DEERE Secondary tower system!

- Twist off lid requiring no tools.
- No Rust, poly / rubber design
- Fits 5 – 12 port Manifolds for Flexi-Coil and John Deere secondary towers.

Secondary manifolds

Secondary manifold on seeding tool

One-piece twist-off removable lid with tether

Secondary manifolds with 1-in. diameter lines evenly distribute the seed and/or fertilizer from the primary manifold(s) to the furrow openers.

The secondary manifold is made of durable, maintenance-free ethylene-propylene molded (EPDM) rubber. Features of the secondary manifold:

- Rust resistant, important when applying fertilizer or treated seed
- Easier to service with an easy-to-remove lid, no tools required
- No long bolt in the secondary tower
- Lid is tethered to the manifold
- The outlet ports are numbered

Call your local Enns Brothers Parts Department today for a quote to update your Air Seeder!

What we need to know to give you an accurate quote:

- Number of towers on your current unit
- Number of Ports (secondary lines) from each tower
